

In cases where there is a danger of fall and where, for technical reasons or a very short duration of task, a safe access cannot be secured otherwise, it is necessary to consider using personal protective equipment. Such usage must never be improvised and its selection is specifically supposed to be subject to the relevant core safety measures at the job site.

What must be checked?
Textile material: Cuts, chafing, damage caused by aging or due to high temperatures and effects of chemicals etc.
Seams: Ripping, cuts or unsewn threads.
Buckles: Correct buckle functionality.
Metal elements: Corrosion, wear etc.

Directions for Use
Do not use the safety harness (hereinafter referred to as the harness) unless you read the Directions for Use carefully.

These Directions for Use show various options of application. Some of the established ways of improper use are shown in crossed pictures. The ways of improper use are not limited to those listed as their number is inexhaustible. The harness can only be used in ways shown on pictures which are not crossed. Any other way of use is forbidden and may lead to an accident or death. In case of any usage issue or confusion, please contact the MANUFACTURER. The Directions for Use must be delivered to the user in the language of the country in which the harness is to be used.

Usage
CAUTION: Professional training is required prior to use.
The harness is fitted with two "A" EN 361-marked attachment elements designed for fall arrest (15kN breaking strength, see the fig.).

Only these two points may be used for fall arrest. Open space below the user must be great enough so that, in the case of a fall, there will not be contact with any obstacles. The anchor point should be located in such a way so that both the free fall and final fall distance are kept to a minimum distance.

The harness belt is fitted with three attachment elements designed for positioning in accordance with EN 358 and EN 813 (15kN breaking strength, see the fig.)

They are not intended to be connected to the fall arrest system. Sometimes it is necessary that work positioning systems or restraints are supplemented by multiple or individual fall arrest equipment. Secure point must be constantly remain at or above the belt and the connecting equipment must always be taut with free movement limited to a maximum of 0.6 m. Warning: Motionless hanging in a harness for a prolonged period can cause trauma or even death. It is, therefore, necessary to reduce this period of motionless suspension to a minimum. The harness belt can be used by users with total weight up to 150 kg, including body weight, tools and equipment (use only according to EN 358).

The product must not be used in combination with an energy absorber in accordance with EN 358 and a metal connector conforming to EN 362 (a steel or aluminum alloy snap hook, eventually oval buckle, the so-called malions) and, also, in combination with other protective equipment that, together with the harness, form a simple compatible system.

Anchoring devices must conform to EN 795 (with a minimum strength of 12kN for metal device or 18kN for textile device) and should preferably be located above the user's position. Warning: It is forbidden to use the chest harness separately (EN 361 and EN 12277 type D) without a sit harness.

This product may only be used by responsible and professionally trained personnel or a person under permanent supervision of such personnel. Check whether the harness is compatible with other pieces of your equipment. Use products complying with relevant standards and regulations only. It is necessary that the user of this harness be informed of ways to provide rescue in case of an accident occurring.

Keep in mind that moisture and frost can reduce the strength of some parts of the product.

Warranty
The MANUFACTURER provides a guarantee of 3 years for defects of material and workmanship.

The guarantee does not relate to defects caused by normal wear and tear, negligence, unprofessional handling, improper use, prohibited adjustments and poor storage.

Accidents, damages, negligence and use for which the harness is not suitable. Prior to and following each use, it is required that the condition of the straps and seams be checked, including less accessible parts of the product.

The MANUFACTURER is not liable for direct, indirect or accidental damages in connection with the use of our products or as a consequence thereof.

DEUTSCH

In den Fällen, in denen die Gefahr eines Falls existiert und in denen wegen technischer Gründe oder für die Arbeit mit sehr kurzer Dauer der sichere Zugang nicht anders sichergestellt werden kann, ist die Benutzung von Personensicherheitssystemen zu erwägen. Eine solche Anwendung darf niemals improvisiert werden und ihre Wahl soll in den entsprechenden grundlegenden Sicherheitsmaßnahmen am Arbeitsort spezifisch sichergestellt werden.

Gebrauchsanleitung
Keinen Haltgurt (nachfolgend nur Gurt) ohne sorgfältiges Durchlesen der Gebrauchsanleitung benutzen.

Diese Anleitung zeigt verschiedene Verwendungsmöglichkeiten. Einige bekannte Möglichkeiten der falschen Verwendung sind abgebildet und durchgeschildert. Die Möglichkeiten der falschen Verwendung sind nicht ausgeschöpft und es existiert eine unbegrenzte Anzahl von ihnen. Den Gurt darf man nur gemäß den nicht durchgestrichenen Abbildungen benutzen. Jede andere Benutzung ist verboden.

Benutzung
Achtung: Vor der Benutzung ist ein Fachturaining unerlässlich.

Der Gurt ist mit zwei Verbindungslementen, die für das Auffangen eines Falls bestimmt sind, gekennzeichnet mit "A" EN 361 (Festigkeit 15 kN, siehe Abb.)

ausgerüstet. Nur diese zwei Punkte dürfen für das Auffangen eines Falls benutzt werden. Der Raum der freien Tiefe unter dem Benutzer muss ausreichend sein, damit es bei einem Fall nicht zu einem Aufprall auf irgendein Hindernis kommt. Der Ankerpunkt sollte so platziert werden, dass sowohl der freie Fall als auch die mögliche Weite des Falls auf das kleinste Maß eingeschränkt werden.

Der Gürtel des Gurts ist mit drei Verbindungslementen ausgerüstet, die für die Positionierung gemäß EN 358 und EN 813 (Festigkeit 15 kN, siehe Abb.) bestimmt sind. Sie sind nicht zur Verbindung des Aufgangsystems bestimmt. Manchmal ist es notwendig, die Systeme der Arbeitspositionierung oder des Anhaltens mit kollektiven oder persönlichen Mitteln des Aufgangs falls zu ergänzen. Der Sicherungspunkt muss permanent in oder über dem Niveau der Taille erhalten werden, und das Verbindungsmitel muss ständig angespannt sein und die freie Bewegung ist auf maximal 0,6 m eingeschränkt. Hinweis: Eine unbewegliche Auffangbügelfixierung ist wichtig, diese Dauer der Auffangbügelfixierung auf ein Minimum zu verkürzen. Den Gurt kann man für einen Benutzer mit einem Gewicht bis 150 kg einschließlich Werkzeug und Ausstattung benutzen (Benutzung nur laut EN 358).

Das Produkt darf nur in Kombination mit einem Fallabsorber gemäß EN 355 und einer Metallverbindung, die EN 362 entspricht (Stahl- oder Durakarabiner, gegebenenfalls ovaler Karabiner, sog. Malions), weiter in Kombination mit den sonstigen Sicherungshilfsmitteln, die mit dem Gurt ein einfaches kompatibles
